Executive Summary — NewsBot 2.0

NewsBot 2.0 is an advanced AI-powered news analysis platform designed to interpret, summarize, and analyze news content across multiple languages. Built upon the midterm project, this final version integrates classification, topic modeling, sentiment analysis, summarization, semantic search, multilingual processing, and conversational interaction into a unified system.

The system demonstrates:

- Strong modular architecture
- Advanced NLP capabilities
- Multilingual intelligence
- Production-ready design
- Comprehensive testing and evaluation

NewsBot 2.0 is suitable for real-world applications such as journalism, media monitoring, and intelligence analysis. It meets all final project requirements and represents a professional-grade AI system.
